

CALIBRATION FIXTURE PLUG-IN EXTENDER

067-0589-00

The 067-0589-00 Extender is used for calibrating or troubleshooting 7-Series Plug-In Units operating in a 7000-Series Oscilloscope. The Extender allows the plug-in unit to be operated out of the oscilloscope plug-in compartment, thus providing easy access to components and adjustments.

Coaxial cables with in-line BNC-type connectors are used to couple the display and trigger signals through the Extender. By disconnecting the connectors, the signal output of the plug-in unit can be monitored on a separate measurement system such as a sampling oscilloscope. In addition, the BNC connectors provide a convenient means of applying external signals directly to the input of the oscilloscope amplifier.
