

SSP-KONSTANTER, Series 62 N and Series 64 N Computer Controlled Laboratory Power Supplies

3-349-078-03
2/8.04

- **Series 62 N:** 500 W, 1000 W output power
Series 64 N: 2000 W, 3000 W output power
- Measuring functions for voltage, current and power with extreme value memory
- Minimal residual ripple and short response times
- IEEE488/RS232C or RS232C interfaces (plug-in module option)
- Integrated sequence function for the generation of voltage and current profiles with automatic sequence
- Storage of 10 device configurations
- Output can be activated and deactivated
- Lockable operating elements
- Master-slave operation is possible
- Overvoltage, overcurrent and excessive temperature protection
- Compact design, lightweight and minimal power loss thanks to switching controller technology

Series 62N

Series 64N

Description

SSP KONSTANTER (single-output system power supplies) DC power supplies can be manually or remote controlled for laboratory or systems applications. Despite high output power, the devices are small in size and lightweight as well.

The floating output is provided with protective isolation from the mains power supply, as well as all optional computer interfaces, and has been classified as a safety extra-low voltage circuit (SELV) in accordance with VDE / IEC. Nominal power supplied by the voltage and current controlled output can be delivered over widely adjustable voltage and current ranges.

These devices are generally equipped with operating elements and displays, as well as an analog interface. An optional IEEE488/RS232C or an RS232C interface can be inserted into the device in order to link it to computer controlled systems.

Manual adjustment of voltage and current is accomplished by means of two rotary knobs with adjustable resolution. A wide variety of additional functions can be selected with the keys. Two 4-place digital LED displays provide information concerning measurement and set values. Current operating modes, selected display parameters and the status of device and interface functions are indicated with LEDs.

The analog interface allows for the adjustment of output voltage and current with external control voltages, and for the linking of several devices in the master-slave operating mode. The power output can be activated and deactivated, the front panel can be locked, and stored configurations can be recalled via the floating optocoupler input.

Range of Applications

Electrical and electronic devices may be subjected to substantial supply power fluctuations depending upon where they are used and prevailing ambient conditions.

The automotive electrical system characteristics which can be observed when the starter motor is cranked is a typical example. R&D, production and testing departments must therefore assure that electrical equipment reliably fulfills all of the required functions at any point in time under adverse conditions.

Series 62 N and 64 N SSP KONSTANTERs provide the user with a number of functions for solutions to these problems. High throughput rates can be achieved with automatic systems for routine testing in combination with the SSP KONSTANTER.

Short response time assures highly accurate simulation of rapidly changing voltage or current profiles.

The performance of consuming devices as related to dynamic supply power can thus be easily tested and simulated.

SSP-KONSTANTER, Series 62 N and Series 64 N

Computer Controlled Laboratory Power Supplies

Adjustable Functions

- Voltage and current setpoints
- Voltage and current limit values (soft limits)
- Output activation and deactivation
- Overvoltage protection trigger value
- Overcurrent protection (limiting with or without shutdown)
- Delay time for overcurrent shutdown
- Power-on status
- Reset device configurations
- Save device configurations to memory
- Recall device configurations individually or sequentially
- Select trigger input function
- Rounding of measurement value for display purposes
- Service request masks (SRQ) *
- Activate and deactivate digital displays *
- Start self-test at power-up *

* Only via computer interface

Acquirable Information

- Current voltage and current measurement values
- Min. and max. voltage and current measurement values
- Current output power
- Current device settings
- Current device status (control mode, excessive temperature, busy *)
- Occurred event (power or phase failure, excessive temperature, overvoltage, overload, program error *)
- Device ID *

* Only via computer interface

Protective and Additional Functions

- Sensor terminals protected against pole reversal with automatic switching to sensing mode (auto-sensing)
- Protection against excessive temperature
- Protection against output pole reversal
- Locking of front panel operation
- Device configuration memory with battery backup
- Power and phase failure recognition
- In-rush current limiting

Auto-Sensing

Operation in the sensing mode (remote sensing) can be activated in order to compensate for voltage drops at the power lines.

The sensing mode is automatically activated by connecting the (-) negative sensing terminal to the negative load level.

Max. compensatable
voltage drop 1 V per line

Locking of Front Panel Operation

The control elements can be secured against unauthorized use by pressing a key, with a computer command, or by applying a signal to the trigger input.

Activating and Deactivating the Output

The power output can be activated and deactivated by pressing a key, with a computer command, or by applying a signal to the trigger input (no electrical isolation).

Power-On Status

The power supply can be placed into one of the following conditions after power-up:

- Reset = default setting (0 V, 0 A, output inactive etc.)
- Recall = last setting (same as prior to last shutdown)
- Standby = last setting, but with inactive output

Overcurrent Protection

The device can be configured to respond to current limiting in one of the following ways:

- OCP off = continuous current limiting (UI characteristic curve)
- OCP on = deactivate output if duration of current limiting is greater than delay time
Delay time: setting range from 0.00 to 99.99 s
resolution: 10 ms

Trigger Selection

The device can be configured to respond to the floating trigger input at the analog interface in one of the following ways:

- output = activate / deactivate the power output
- local lock = lock the control elements
- recall = individual, step-by-step recall of stored settings
- sequence = start / stop the sequence function

SSP-KONSTANTER, Series 62 N and Series 64 N Computer Controlled Laboratory Power Supplies

Extreme Measurement Value Memory

The MIN-MAX function causes automatic acquisition and storage to memory of minimum and maximum voltage and current measurement values.

Memory Function

Device configurations can be saved to, and recalled from the memory with battery backup. The memory has two storage areas:

- 10 memory locations for complete configurations
- 245 memory locations for the sequence function (voltage setpoint USET, current setpoint ISET, dwell time TSET)

Sequence Function

The sequence function allows for automatic recall of settings which have been saved to the sequence memory.

The sequence function includes the following parameters:

- START = beginning memory location address
- STOP = ending memory location address
- REPETITION = number of sequence repetitions (1 to 255 or 0 = continuous repetition)
- TSET = dwell time specific to memory location (10 ms to 99.99 s)
- TDEF = dwell time independent of memory location (10 ms to 99.99 s)

Application Example:

Generation of a voltage profile in accordance with DIN 40839 (automotive electrical system while cranking the starter motor)

Note:

Maintenance of voltage rise and decay times can only be assured within a limited load impedance range.

Output voltage over and undershooting with load step within range of 20 to 100% I _{nominal}	ΔI = -80 %	700 μs	800 μs	800 μs	800 μs
	ΔI = 10 %	200 mV	200 mV	200 mV	200 mV
	ΔI = 80 %	500 mV	650 mV	650 mV	650 mV
Output voltage response time ³⁾ where U _{set} step = 0 V → U _{nominal} where U _{set} step = U _{nominal} → 1 V	Tolerance	160 mV	160 mV	160 mV	160 mV
	No load, nominal load	5 ms, 15 ms	5 ms, 10 ms	5 ms, 10 ms	5 ms, 10 ms
Output capacitor discharging circuit	No load, nominal load	300 ms, 15 ms	300 ms, 15 ms	300 ms, 15 ms	300 ms, 15 ms
	Nominal value	2000 μF	2000 μF	4000 μF	6000 μF
	Power	25 W	25 W	50 W	75 W
Measuring Function					
Measuring Range	Voltage	-4.00 ... +88.16 V	-4.00 ... +88.16 V	-4.00 ... +88.16 V	-4.00 ... +88.16 V
	Current	-0.48 ... +13.34 A	-0.96 ... +26.68 A	-1.92 ... +53.37 A	-2.88 ... +80.06 A
	Power	0 ... >550 W	0 ... >1100 W	0 ... >2200 W	0 ... >3300 W
Measuring resolution: local, remote	Voltage	10 mV	10 mV	10 mV	10 mV
	Current	2 / 10 mA, 2 mA	5 mA, 10 mA	10 mA, 10 mA	10 mA, 10 mA
	Power	1 W, 0.1 W	1 W, 0.1 W	1 W, 0.1 W	1 W, 0.1 W
Measuring accuracy (at 23 ± 5° C)	Voltage	0.05% +40 mV	0.05% +40 mV	0.05% +40 mV	0.05% +40 mV
	Current	0.3 % +10 mA	0.3 % +20 mA	0.3 % +30 mA	0.4% +40 mA
	Power	0.4% +1 W	0.4% +1.5 W	0.4% +2.5 W	0.4% +4 W
Measured value temperature coefficient Δ / K	Voltage	80 ppm +0.4 mV	80 ppm +0.4 mV	80 ppm +0.4 mV	80 ppm +0.4 mV
	Current	150 ppm +0.1 mA	150 ppm +0.1 mA	150 ppm +0.2 mA	150 ppm +0.4 mA
Protective functions					
Trigger value for output overvoltage protection					
Response time	Setting range	3 ... 100 V	3 ... 100 V	3 ... 100 V	3 ... 100 V
	Setting resolution	100 mV	100 mV	100 mV	100 mV
	Setting accuracy	0.3% + 100 mV	0.3% + 100 mV	0.3% + 100 mV	0.3% + 100 mV
Reverse polarity protection load capacity	Continuous	30 A	55 A	110 A	170 A
Reverse voltage withstand capacity	Continuous	100 V –	100 V –	100 V –	100 V –
Additional Functions					
Sensing mode operation	Compensatable voltage drop per line	1 V	1 V	1 V	1 V
General					
Power Supply	Line voltage	230 V~ + 10 / – 15%	230 V~ + 10 / – 15%	3 x 400 / 230 V~ + 10 / – 15%	3 x 400 / 230 V~ + 10 / – 15%
		47 ... 63 Hz	47 ... 63 Hz	47 ... 63 Hz	47 ... 63 Hz
Power consumption	At nom. load	1150 VA, 680 W	1750 VA, 1150 W	4800 VA, 2500 W	7000 VA, 3800 W
	At no load	50 VA, 25 W	50 VA, 25 W	150 VA, 40 W	160 VA, 55 W
Max. power loss		150 W	200 W	700 W	1000 W
Efficiency	At nom. load	> 74 %	> 85 %	> 80 %	> 80 %
Switching frequency	Typical	100 kHz	200 kHz	200 kHz	200 kHz
Inrush current	Max.	50 A _S	50 A _S	50 A _S	50 A _S
Fuses		1 ea. M 15 A / 250 V (6.3 x 32 mm, UL)		3 ea. M 15 A / 250 V (6.3 x 32 mm, UL)	
MTBF	at 40 °C	> 50,000 h	> 47,000 h	> 33,000 h	> 29,000 h

¹⁾ Current setting values are rounded off at the digital display to multiples of 10 mA (< 100 A) or 100 mA (> 100 A).

²⁾ In sensing mode at the output terminals

³⁾ At maximum current setting not including processing time for the previous voltage setting command
