## **Definitions**

#### General

Product data applies under the following conditions:

- · Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- · Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

#### Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as <,  $\leq$ ,  $\geq$ ,  $\pm$ , or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

#### Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

#### Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

#### Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

#### Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

#### **Uncertainties**

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are indicated as follows: "parameter: value".

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

|                                    | envelope   | envelope of acquired waveforms                                      |
|                                    | average  | average of acquired waveforms,                                      |
|                                    | Ŭ  | max. average depth depends on                                       |
|                                    |  | decimation mode <sup>2</sup>  |
|                                    | sample   | max. 16 777 215   |
|                                    | high resolution  | max. 65 535   |
|                                    | root mean square   | max. 255  |
|                                    | reset condition  | no reset (standard), reset by time, reset by                        |
|                                    | . 330t ooriginori  | number of processed waveforms                                       |
| Waveform streams per channel       |  | up to 3 with independent selection of                               |
| Tratoronin outcamo per chamine     |  | decimation mode and waveform arithmetic                             |

1 The maximum available memory depth depends on the bit depth of the acquired data and, therefore, on the settings of the acquisition system, such as decimation mode, waveform arithmetic, number of waveform streams or the high definition mode.

<sup>&</sup>lt;sup>2</sup> Waveform averaging is not compatible with peak detect decimation.

| Sampling modes       | realtime mode     | max. sampling rate set by digitizer       |
|----------------------|-------------------|---|
|                      | interpolated time | enhancement of sampling resolution by     |
|                      |                   | interpolation; max. equivalent sampling   |
|                      |                   | rate is 4 Tsample/s                       |
|                      | equivalent time   | enhancement of sampling resolution by     |
|                      |                   | repetitive acquisition; max. equivalent   |
|                      |                   | sampling rate is 4 Tsample/s              |

| Main trigger modes |   |   |  |
|--------------------|---|---|--|
| Edge               | triggers on specified slope (positive   | triggers on specified slope (positive, negative or either) and level  |  |
| Glitch             | triggers on glitches of positive, ne specified width  | triggers on glitches of positive, negative or either polarity that are shorter or longer than   |  |
|                    | glitch width  | 100 ps to 1000 s  |  |
|                    |   | 50 ps to 1000 s (R&S®RTO1044 only)  |  |
| Width              | triggers on positive or negative pu inside or outside the interval  | ulse of specified width; width can be shorter, longer,  |  |
|                    | pulse width   | 100 ps to 1000 s  |  |
|                    |   | 50 ps to 1000 s (R&S®RTO1044 only)  |  |
| Runt               |   | ative or either polarity that crosses one threshold but<br>before crossing the first one again; runt pulse width<br>nside or outside the interval   |  |
|                    | runt pulse width  | 100 ps to 1000 s  |  |
|                    |   | 50 ps to 1000 s (R&S®RTO1044 only)  |  |
| Window             | 55  | triggers when signal enters or exits a specified voltage range; triggers also when signal stays inside or outside the voltage range for a specified period of time  |  |
| Timeout            | triggers when signal stays high, lo   | triggers when signal stays high, low or unchanged for a specified period of time  |  |
|                    | timeout   | 100 ps to 1000 s  |  |
|                    |   | 50 ps to 1000 s (R&S®RTO1044 only)  |  |
| Interval           | triggers when time between two consecutive edges of same slope (positive or negative) is shorter, longer, inside or outside a specified range |   |  |
|                    | interval time   | 100 ps to 1000 s  |  |
|                    |   | 50 ps to 1000 s (R&S®RTO1044 only)  |  |
| Slew rate          | and lower voltage levels is shorter   | triggers when the time required by a signal edge to toggle between user-defined upper<br>and lower voltage levels is shorter, longer, inside or outside the interval; edge slope<br>may be positive, negative or either |  |
|                    | toggle time   | 100 ps to 1000 s  |  |
|                    |   | 50 ps to 1000 s (R&S®RTO1044 only)  |  |
| Data2clock         | triggers on setup time and hold tin   | ggers on setup time and hold time violations between clock and data present on any  |  |
|                    | two input channels; monitored tim   | two input channels; monitored time interval may be specified by the user in the range   |  |
|                    |   | clock edge and must be at least 100 ps wide   |  |
| Pattern            |   | triggers when a logical combination (and, nand, or, nor) of the input channels stays true for a period of time shorter, longer, inside or outside a specified range   |  |

| State          | triggers when a logical combination (and, nand, or, nor) of the input channels stays true at a slope (positive, negative or either) in one selected channel |  |  |
|----------------|---|--|--|
| Serial pattern | may be high (H), low (L) or don't ca<br>or either; hardware CDR selectable  | triggers on serial data pattern up to 128 bit clocked by one input channel; pattern bits may be high (H), low (L) or don't care (X); clock edge slope may be positive, negative or either; hardware CDR selectable as clock source (requires R&S®RTO-K13 option) |  |
|                | max. data rate  | < 2.50 Gbps  |  |
|                |   | < 5 Gbps (R&S®RTO1044 only)  |  |
| TV/video       |   | triggers on baseband analog progressive and interlaced video signals including NTSC,   |  |
|                | PAL, PAL-M, SECAM, EDTV and HDTV broadcast standards as well as custom bi-<br>and tri-level sync video standards  |  |  |
|                | trigger modes   | all fields, odd fields, even fields, all lines, line number  |  |

| Advanced trigger modes           |  |  |  |
|----------------------------------|--|--|--|
| Trigger qualification            | trigger events may be qualified by a logical   | combination of unused channels   |  |
|                                  | qualifiable events   | edge, glitch, width, runt, window, timeout, interval   |  |
| Sequence trigger (A/B/R trigger) | triggers on B event after occurrence of A event; delay condition after A event specified either as time interval or number of B events; an optional R event resets the trigger sequence to A |  |  |
|                                  | A event  | any trigger mode   |  |
|                                  | B event  | edge, glitch, width, runt, window, timeout, interval, slew rate  |  |
|                                  | R event  | edge, glitch, width, runt, window, timeout, interval, slew rate  |  |
| Serial bus trigger               | basic  | I <sup>2</sup> C, SPI, UART/RS-232   |  |

|                                  | trigger level  | ±5 V   |  |
|                                  | sensitivity  |  |  |
|                                  | input frequency ≤ 100 MHz  | 300 mV (V <sub>pp</sub> )  |  |
|                                  | 100 MHz < input frequency ≤ 500 MHz  | 600 mV (V <sub>pp</sub> )  |  |
|                                  | input coupling   | AC, DC (50 Ω and 1 MΩ), GND, HF reject (attenuates > 50 kHz or > 50 MHz, user-selectable), LF reject (attenuates < 5 kHz or < 50 kHz, user-selectable)                             |  |
|                                  | trigger modes  | edge (rise or fall)  |  |

The R&S®RTO1044 frontend samples at 20 Gsample/s when at most one channel from each pair {channel1, channel2} and {channel3, channel4} is active; and the user-selected sampling resolution in realtime sampling mode or interpolated time sampling mode is 50 ps or smaller.

| Trigger out | functionality  | a pulse is generated for every acquisition |
|-------------|----------------|--|
|             |                | trigger event                              |
|             | output voltage | 0 V to 5 V at high impedance;              |
|             |                | 0 V to 2.5 V at 50 Ω                       |
|             | pulse width    | selectable between 50 ns and 60 ms         |
|             | pulse polarity | low active or high active                  |
|             | output delay   | depends on trigger settings                |
|             | jitter         | ±600 ps (meas.)                            |

# **Waveform measurements**

| General features | measurement panels | up to 8 measurement panels; each panel may contain any number of automatic  |
|------------------|--------------------|---|
|                  | gate               | measurements of the same category delimits the display region evaluated for automatic measurements  |
|                  | reference levels   | user-configurable vertical levels define support structures for automatic measurements  |
|                  | statistics         | displays maximum, minimum, mean,<br>standard deviation, RMS and<br>measurement count for each automatic<br>measurement  |
|                  | track              | measurement results displayed as continuous trace that is time-correlated to the measurement source; requires R&S®RTO-K12 or R&S®RTO-K31 option   |
|                  | long-term analysis | history of selected measurements as trace against count index   |
|                  | histogram          | available for the main measurement of each measurement panel; automatic or manual selection of bin number and scale; counters for measurements under, within and over the histogram range |
|                  | limit check        | measurements tested against user-defined margins and limits; pass or fail conditions may launch automatic response: acquisition stop, beep, print and save waveform                       |

| Measurement category | amplitude and time     | amplitude, high, low, maximum, minimum, peak-to-peak, mean, RMS, sigma, overshoot, area, rise time, fall time, positive width, negative width, period, frequency, duty cycle, delay, phase, burst width, pulse count, positive switching, negative switching, cycle area, cycle mean, cycle RMS, cycle sigma, setup/hold time, setup/hold ratio, pulse train, DC voltmeter (requires Rohde & Schwarz active probe with R&S®ProbeMeter functionality) |
|----------------------|------------------------|--|
|                      | eye diagram            | extinction ratio, eye height, eye width, eye top, eye base, Q factor, S/N ratio, duty cycle distortion, eye rise time, eye fall time, eye bit rate, eye amplitude, jitter (peak-to-peak, 6-sigma, RMS)   |
|                      | spectrum               | channel power, bandwidth, occupied bandwidth, harmonic search, total harmonic distortion THD in dB and % using power values, total harmonic distortion variants THD <sub>a</sub> , THD <sub>u</sub> and THD <sub>r</sub> using voltage, overall voltage and overall voltage root means square, peak list (THD <sub>a</sub> , THD <sub>u</sub> , THD <sub>r</sub> and peak list require R&S®RTO-K18 option)   |
|                      | jitter                 | cycle-to-cycle jitter, N-cycle jitter, cycle-to-cycle width, cycle-to-cycle duty cycle, time-interval error, data rate, unit interval, skew delay, skew phase; requires R&S®RTO-K12 option   |
| Cursors              | setup                  | up to 4 cursor sets on screen, each set<br>consisting of two horizontal and two<br>vertical cursors  |
|                      | target                 | acquired waveforms (input channels),<br>math waveforms, reference waveforms,<br>track waveforms, XY diagrams   |
|                      | operating mode         | vertical measurements, horizontal measurements or both; vertical cursors either set manually or locked to waveform   |
| Histogram            | source                 | acquired waveform (input channels), math waveform, reference waveform  |
|                      | mode                   | vertical (for timing statistics), horizontal (for amplitude statistics)  |
|                      | automatic measurements | waveform count, waveform samples, histogram samples, histogram peak, peak value, maximum, minimum, median, range, mean, sigma, mean ± 1, 2 and 3 sigma, marker ± probability   |

# Mask testing

| Test definition               | number of masks                | up to 8 simultaneously                      |
|-------------------------------|--------------------------------|---|
|                               | source                         | acquired waveforms (input channels),        |
|                               |                                | math waveforms                              |
|                               | fail condition                 | sample hit or waveform hit                  |
|                               | fail tolerance                 | minimum number of fail events for test fail |
|                               |                                | in range from 0 to 4 000 000 000            |
|                               | test rate                      | up to 600 000 waveforms per second          |
|                               | action on error                | acquisition stop, beep, print and save      |
|                               |                                | waveform                                    |
|                               | save/load to file              | test and mask settings (.xml format)        |
| Mask definition with segments | number of independent segments | up to 8                                     |
|                               | segment definition             | array of points and connecting rule (upper, |
|                               |                                | lower, inner) define segment region         |
|                               | segment input                  | point and click on touchscreen, editable    |
|                               |                                | list  |

| Mask definition with tolerance tube     | input signal                 | acquired waveform   |  |
|---|------------------------------|---|--|
|   | definition of tolerance tube | horizontal width, vertical width, vertical stretch, vertical position   |  |
| Mask definition with eye mask assistant | primary mask shape           |   |  |
| (requires R&S®RTO-K12 option)           | type                         | diamond, square, hexagon, octagon   |  |
|   | dimensions                   | main and secondary height, main and secondary width, depends on selected shape  |  |
|   | position                     | vertical offset, horizontal offset  |  |
|   | secondary mask shapes        |   |  |
|   | locations                    | any combination of left, right, top, bottom   |  |
|   | position                     | horizontal and vertical offset with respect   |  |
|   |                              | to center of primary mask shape   |  |
| Result statistics                       | category                     | completed acquisitions, remaining   |  |
|   |                              | acquisitions, state, sample hits, mask hits, fail rate, test result (pass or fail)  |  |
| Visualization options                   | waveform style               | vectors, dots   |  |
|   | violation highlighting       | hits (on/off), highlight persistence  |  |
|   |                              | (50 ms to 50 s or infinite), waveform color (default: red)  |  |
|   | mask colors                  | configurable colors for mask without violation (default: translucent gray), mask with violation (default: translucent red), mask with contact (default: translucent pale red) |  |

## **Waveform math**

| General features      | number of math waveforms            | up to 4  |  |  |
|-----------------------|-------------------------------------|--|--|--|
|                       | number of reference waveforms       | up to 4  |  |  |
|                       | waveform arithmetic                 | user-selectable average or envelope of   |  |  |
|                       |                                     | consecutive waveforms  |  |  |
| Algebraic expressions | user may define complex mathematica | al expressions involving waveforms and   |  |  |
|                       | measurement results                 | measurement results  |  |  |
|                       | math functions                      | add, subtract, multiply, divide, absolute  |  |  |
|                       |                                     | value, square, square root, integrate,   |  |  |
|                       |                                     | differentiate, exp, log <sub>10</sub> , log <sub>e</sub> , log <sub>2</sub> , rescale, |  |  |
|                       |                                     | sin, cos, tan, arcsin, arccos, arctan, sinh,   |  |  |
|                       |                                     | cosh, tanh, autocorrelation,   |  |  |
|                       |                                     | crosscorrelation   |  |  |
|                       | logical operators                   | not, and, nand, or, nor, xor, nxor   |  |  |
|                       | relational operators                | Boolean result of =, $\neq$ , >, <, $\leq$ , $\geq$                                    |  |  |
|                       | frequency domain                    | spectral magnitude and phase, real and   |  |  |
|                       |                                     | imaginary spectra, group delay   |  |  |
|                       | digital filter                      | lowpass, highpass  |  |  |
|                       | special functions                   | CDR transform; requires R&S®RTO-K12  |  |  |
|                       |                                     | option   |  |  |
| Optimized math        | operators                           | add, subtract, multiply, invert, absolute  |  |  |
|                       |                                     | value, differentiate, log <sub>10</sub> , log <sub>e</sub> , log <sub>2</sub> ,        |  |  |
|                       |                                     | rescale, FIR, FFT magnitude  |  |  |
| Spectrum analysis     | FFT magnitude spectrum              |  |  |  |
|                       | setup parameters                    | center frequency, frequency span, frame  |  |  |
|                       |                                     | overlap, frame window (rectangular,  |  |  |
|                       |                                     | Hamming, Hann, Blackman, Gaussian,   |  |  |
|                       |                                     | Flattop, Kaiser Bessel), user-selectable   |  |  |
|                       |                                     | spectrum averaging, RMS, envelope,   |  |  |
|                       |                                     | max. hold and min. hold (max. hold and   |  |  |
|                       |                                     | min. hold require R&S®RTO-K18 option)  |  |  |

# Search and mark function

| General description  | scans acquired waveforms for occurrence of a user-defined set of events and highliq each occurrence |  |  |
|----------------------|---|--|--|
| Basic setup          | source  | all physical input channels, math waveforms, reference waveforms                   |  |
|                      | search panels   | up to 8, where each panel may manage multiple event searches                       |  |
|                      | search mode   | manually triggered or continuous   |  |
|                      | search conditions   |  |  |
|                      | supported events  | edge, glitch, width, runt, window, timeout, interval, slew rate, data2clock, state |  |
|                      | event configuration   | identical to corresponding trigger event   |  |
|                      | event selection   | single or multiple events on same source   |  |
| Search scope         | mode  | current waveform, gated time interval  |  |
| Result visualization | table   |  |  |
|                      | sort mode   | horizontal position or vertical value  |  |
|                      | max. result count   | specifies max. table size  |  |
|                      | zoom window   | centered on highlighted event  |  |

# **Display characteristics**

| Diagram types                   | Yt, XY, long-term measurement, spectrum, spectrogram (spectrogram requires R&S®RTO-K18 option)   |
|---------------------------------|--|
| Display interface configuration | display area can be split up into separate diagram areas by dragging and dropping signal icons; each diagram area can hold any number of signals; diagram areas may be stacked on top of each other and later accessed via the dynamic tab menu  |
| Signal bar                      | accommodates timebase settings, trigger settings and signal icons; signal bar may be docked to left or right side of display area or hidden  |
| Signal icon                     | each active waveform is represented by a separate signal icon on the signal bar; the signal icon displays the individual vertical and acquisition settings; a waveform can be minimized to its signal icon so that it appears as a realtime preview in miniature form; dialog boxes and measurement results may also be minimized to a signal icon |
| Axis label                      | X-axis ticks and Y-axis ticks labeled with tick value and physical unit  |
| Diagram label                   | diagrams may be individually labeled with a descriptive user-defined name  |
| Diagram layout                  | grid, crosshair, axis labels and diagram label may be switched on and off separately   |
| Persistence                     | 50 ms to 50 s, or infinite   |
| Zoom                            | user-defined zoom window provides vertical and horizontal zoom; each diagram area supports multiple zoom windows; touchscreen interface simplifies resize and drag operations on zoom window   |
| Signal colors                   | predefined or user-defined color tables for persistence display  |

# Input and output

| Front                     |                 |  |
|---------------------------|-----------------|--|
| Channel inputs            |                 | BNC-compatible,  |
|                           |                 | for details see Vertical system                            |
|                           | probe interface | auto-detection of passive probes,                          |
|                           |                 | Rohde & Schwarz active probe interface                     |
| Auxiliary output          |                 | SMA connector, for future use                              |
| Probe compensation output | signal shape    | rectangle, V <sub>low</sub> = 0 V, V <sub>high</sub> = 1 V |
|                           |                 | amplitude 1 V (V <sub>pp</sub> ) ± 5 %                     |
|                           | frequency       | 1 kHz ± 1 %  |
|                           | impedance       | 50 Ω (nom.)  |
| Ground jack               |                 | connected to ground  |
| USB interface             |                 | 2 ports, type A plug, version 2.0                          |

#### Version 28.00, June 2017

| Rear                       |                                     |
|----------------------------|-------------------------------------|
| External trigger input     | BNC,                                |
|                            | for details see Trigger system      |
| Trigger out                | BNC,                                |
|                            | for details see Trigger system      |

# **Options**

## R&S®RTO-B1

Mixed signal option, additional 16 logic channels

#### Vertical system

| Input channels                |   | 16 logic channels (D0 to D15)                  |
|-------------------------------|---|--|
| Arrangement of input channels |   | arranged in two logic probes with              |
|                               |   | 8 channels each, assignment of the logic       |
|                               |   | probes to the channels (D0 to D7 or D8 to      |
|                               |   | D15) is displayed on the probe                 |
| Input impedance               |   | 100 k $\Omega$ ± 2 %    ~4 pF (meas.) at probe |
|                               |   | tips   |
| Maximum input frequency       | signal with minimum input voltage swing | 400 MHz (meas.)                                |
|                               | and hysteresis setting: normal          |  |
| Maximum input voltage         |   | ±40 V (V <sub>p</sub> )                        |
| Minimum input voltage swing   |   | 500 mV (V <sub>pp</sub> ) (meas.)              |
| Threshold groups              |   | D0 to D3, D4 to D7, D8 to D11 and D12 to       |
|                               |   | D15  |
| Threshold level               | range                                   | ±8 V in 25 mV steps                            |
|                               | predefined                              | CMOS 5.0 V, CMOS 3.3 V, CMOS 2.5 V,            |
|                               |   | TTL, ECL, PECL, LVPECL                         |
| Threshold accuracy            |   | ±(100 mV + 3 % of threshold setting)           |
| Comparator hysteresis         |   | normal, robust, maximum                        |

#### **Horizontal system**

| Channel deskew          | range for each channel | ±200 ns          |
|-------------------------|------------------------|------------------|
| Channel-to-channel skew |                        | < 500 ps (meas.) |

#### **Acquisition system**

| Sampling rate                      | max.                    | 5 Gsample/s on each channel       |
|------------------------------------|-------------------------|-----------------------------------|
| Realtime waveform acquisition rate | max.                    | > 200 000 waveforms/s             |
| Memory depth                       | at max. sampling rates  | 200 Msample for every channel     |
|                                    | at lower sampling rates | 100 Msample for every channel     |
| Decimation                         |                         | pulses lost due to decimation are |
|                                    |                         | displayed                         |

## Trigger system

| Holdoff range | time   | 100 ns to 10 s, fixed and random |
|---------------|--------|----------------------------------|
|               | events | 1 event to 2 000 000 000 events  |

| Trigger modes |   |   |  |
|---------------|---|---|--|
| Edge          | triggers on specified slope (pos  | triggers on specified slope (positive, negative or either) in the source signal                         |  |
|               | sources   | any channel from D0 to D15 or any logical combination of D0 to D15                                      |  |
| Width         | triggers on positive or negative<br>be shorter, longer, equal, inside                       | pulse of specified width in the source signal; width can e or outside the interval                      |  |
|               | sources   | any channel from D0 to D15 or any logical combination of D0 to D15                                      |  |
|               | pulse width   | 200 ps to 10 s  |  |
| Timeout       | triggers when the source signal stays high, low or unchanged for a specified period of time |   |  |
|               | sources   | any channel from D0 to D15 or any logical combination of D0 to D15                                      |  |
|               | timeout   | 200 ps to 10 s  |  |
| Data2clock    | 1   | I time violations between a clock signal and a data with a max. width of 200 ns and a position of cedge |  |
|               | data signal   | any subset of channels from D0 to D15 or any user-defined bus signal                                    |  |
|               | clock signal  | any channel from D0 to D15  |  |

| Pattern            | triggers when the source goes true or stays true for a period of time shorter, longer, equal, inside or outside a specified range                                |   |
|--------------------|--|---|
|                    | sources  | any logical combination of D0 to D15 or any user-defined bus signal |
|                    | pulse width  | 200 ps to 10 s  |
| State              | triggers on the slope (positive, matches a user-defined logical  | negative or either) of the clock signal when data signal state      |
|                    | data signal  | any logical combination of D0 to D15 or any user-defined bus signal |
|                    | clock signal   | any channel from D0 to D15  |
| Serial pattern     | triggers on a serial data pattern of up to 32 bit; pattern bits may be high (H), low (L) or don't care (X); clock edge slope may be positive, negative or either |   |
|                    | data signal  | any channel from D0 to D15 or any logical combination of D15 to D15 |
|                    | clock signal   | any channel from D0 to D15  |
|                    | max. data rate   | 1 Gbps  |
| Serial bus trigger | basic  | I <sup>2</sup> C, SPI, UART/RS-232                                  |
|                    | optional   | LIN, CAN, FlexRay™ and I2S with                                     |
|                    |  | dedicated software options  |
|                    | sources  | any channel from D0 to D15  |

#### **Waveform measurements**

| General features           | measurement panels, gate, statistics,       |
|----------------------------|---|

|---|--|---|--|
| General description                       | The R&S®RTO-K12 jitter analysis option extends the functionality of the standard R&S®RTO firmware with a suite of measurement, analysis and visualization tools for signal integrity analysis and jitter characterization. |   |  |
| Waveform measurements                     | category   | jitter  |  |
|   | measurement functions  | cycle-to-cycle jitter, N-cycle jitter, cycle-to-<br>cycle width, cycle-to-cycle duty cycle,<br>time-interval error, data rate, unit interval,<br>skew delay, skew phase; the standard<br>time measurements period, frequency and<br>setup/hold are also available in the jitter<br>category for convenience       |  |
|   | track  | measurement results displayed as continuous trace that is time-correlated to the measurement source; applicable to time measurements from categories "jitter" and "amplitude and time"; track trace may be used as source for cursor measurements, automatic measurements, math waveforms and reference waveforms |  |
| Waveform math                             | FFT on track   | FFT spectrum of the track trace of measurement results  |  |
|   | CDR transform  | recovers clock timing from source<br>waveform with software CDR and<br>generates synthetic clock waveform that is<br>time-correlated to source  |  |
| Software clock data recovery (CDR)        | number of CDR instances  | up to 2; independently configurable   |  |
|   | algorithm  | phase-locked loop (PLL), constant frequency   |  |
|   | configuration  | nominal bit rate, PLL order (first or<br>second), PLL loop bandwidth, PLL<br>damping factor, initial phase alignment,<br>result selection during initial<br>synchronization   |  |
| Jitter wizard                             | The jitter wizard assists the user in the step-by-step configuration of the R&S®RTO digital oscilloscope for the measurements period/frequency, cycle-by-cycle jitter, time interval error (TIE) and skew.                 |   |  |
| Mask testing with eye mask assistant      | primary mask shape   |   |  |
|   | type   | diamond, square, hexagon, octagon   |  |
|   | dimensions   | main and secondary height, main and secondary width, depends on selected shape  |  |
|   | position   | vertical offset, horizontal offset  |  |
|   | secondary mask shapes  |   |  |
|   | locations  | any combination of left, right, top, bottom   |  |
|   | position   | horizontal and vertical offset with respect to center of primary mask shape   |  |

| Clock data recovery (CDR) General description | The R&S®RTO-K13 realtime clock data recovery option activates the hardware CDR circuitry integrated into the R&S®RTO digital oscilloscope. It provides realtime clock recovery for non-return-to-zero (NRZ) serial data up to 5.0 Gbps. The recovered clock may be used for triggering and jitter analysis. |   |  |  |
|---|---|---|--|--|

|   | configuration parameters  | PLL order (first or second), nominal bit rate, loop bandwidth, relative bandwidth, damping factor, unit interval offset                                     |  |  |
|   | bit rate range  | •   |  |  |
|   | R&S®RTO1002, R&S®RTO1004,<br>R&S®RTO1012, R&S®RTO1014,<br>R&S®RTO1022, R&S®RTO1024  | 200 kbps to 2.5 Gbps  |  |  |
|   | R&S®RTO1044   | 200 kbps to 2.5 Gpbs standard,<br>400 kbps to 5.0 Gbps when operating at<br>20 Gsample/s realtime sampling rate <sup>5</sup>                                |  |  |
|   | relative bandwidth  | 1/500 to 1/3000 of the nominal bit rate   |  |  |
|   | damping factor  | 0.5 to 1.0; relevant for second order PLL only  |  |  |
|   | unit interval offset  | 0.0 to 1.0  |  |  |
| Trigger modes                                 | CDR   | triggers on clock signal recovered from the<br>trigger source signal; phase of the trigger<br>instant user-selectable as fraction of bit<br>period          |  |  |
|   | serial pattern  | main trigger mode "serial pattern" supports<br>the hardware CDR as additional clock<br>source; sampling point user-selectable as<br>fraction of bit period  |  |  |
| Jitter analysis                               | The data and clock timing information of the hardware CDR may be acquired in realtime concurrently to the input data waveform. Analysis of the realtime CDR timing  |   |  |  |
|   | information is possible by means of com   |   |  |  |
|   | visualization tools provided in the R&S®I   |   |  |  |
|   | measurement functions   | time-interval error (TIE), data rate, unit interval   |  |  |
|   | math functions  | CDR transform interprets the acquired clock timing information and generates a synthetic clock waveform that is time-correlated to the input data waveform. |  |  |

The R&S®RTO1044 frontend samples at 20 Gsample/s when: at most one channel from each pair {channel1. c

<sup>&</sup>lt;sup>5</sup> The R&S®RTO1044 frontend samples at 20 Gsample/s when: at most one channel from each pair {channel1, channel2} and {channel3, channel4} is active; and the user-selected sampling resolution in realtime sampling mode or interpolated time sampling mode is 50 ps or smaller.

| High definition mode   |   |   |
|------------------------|---|---|
| General description    | The R&S®RTO-K17 high definition mode increases the numeric resolution of the waveform signal by using digital filtering, leading to a reduced noise. Because of the R&S®RTO digital trigger concept the signals with increased numeric resolution are used as input for triggering. |   |
| Numeric resolution     | bandwidth   | bit resolution  |
|                        | 10 kHz to 50 MHz  | 16 bit  |
|                        | 100 MHz   | 14 bit  |
|                        | 200 MHz   | 13 bit  |
|                        | 300 MHz   | 12 bit  |
|                        | 500 MHz   | 12 bit  |
|                        | 1 GHz   | 10 bit  |
| Realtime sampling rate |   | max. 5 Gsample/s on each channel  |
| Input sensitivity      |   | Input sensitivity range is extended down to 500 µV/div; 500 µV/div is a magnification |
|                        |   | of the 1 mV/div setting.  |

| Spectrum analysis            |  |   |
|------------------------------|--|---|
| General description          | The R&S®RTO-K18 spectrum analysis allows advanced signal analysis in the frequency domain. |   |
| Spectrogram                  | display characteristics  | spectrogram display; a separate<br>spectrogram can be created for each FFT<br>display; each FFT segment of a captured<br>acquisition is displayed in a separate<br>spectrogram line<br>support of logarithmic frequency x-axis                          |
|                              | number of spectrograms   | up to 4   |
|                              | signal colors  | predefined or user-defined color tables for persistence display with the spectrogram  |
|                              | time lines   | in stop mode two separate time lines can<br>be used to navigate through a<br>spectrogram in time; for each time line the<br>relevant FFT segment is displayed in a<br>diagram; the difference in acquisition time<br>between the timelines is displayed |
| Logarithmic frequency x-axis | display characteristics  | logarithmic frequency x-axis for the FFT display with support of analysis tools like cursors and masks  |
|                              |  | logarithmic frequency x-axis for the spectrogram display  |
| Waveform measurements        | measurement functions  | total harmonic distortion variants THDa,<br>THDu and THDr using voltage, overall<br>voltage and overall voltage root means<br>square  |
|                              | peak list  | peak list; diagram labels for easy identification of the peak list entries in the diagram   |
| Waveform math                |  | user-selectable max. hold and min. hold in addition to spectrum averaging, RMS and envelope   |

The R&S®RTO-K21 option is available for R&S®RTO models R&S®RTO1004(high speed not supported), R&S®RTO1014, R&S®RTO1024, R&S®RTO1044 only. The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTO-K21 makes it possible to perform USB 2.0 compliance test measurements with R&S®ScopeSuite, including tests for USB 2.0 (high speed), USB 1.1 (full speed) and USB 1.0 (low speed) with the R&S®RTO. R&S®ScopeSuite supports the R&S®RT-ZF1 USB 2.0 compliance test fixture set and the Allion USB test fixture solutions and the USB-IF signal quality board device/host; it requires Windows 7.

| Supported USB 2.0 compliar |                          | signal quality (EL 2.4 F.6.7); pookst   |

The R&S®RTO-K23 option is available for R&S®RTO models R&S®RTO1022, R&S®RTO1024, R&S®RTO1044 only. The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTO-K23 makes it possible to perform Ethernet compliance test measurements with R&S®ScopeSuite, including tests for 10GBASE-T with the R&S®RTO. R&S®ScopeSuite supports the R&S®RT-ZF2 Ethernet compliance test fixture set; it requires Windows 7. The chapters after the test cases refer to the following specification: IEEE Std 802.3™-2012.

| Supported Ethernet compliance tests |   |
|-------------------------------------|---|
| 10GBASE-T                           | maximum output droop (55.5.3.1)                 |
|                                     | transmitter linearity (55.5.3.2)                |
|                                     | transmitter timing jitter master mode           |
|                                     | (55.5.3.3)                                      |
|                                     | transmitter timing jitter slave mode            |
|                                     | (55.5.3.3)                                      |
|                                     | transmitter power spectral density              |
|                                     | (55.5.3.4) <sup>6</sup>                         |
|                                     | transmitter power level (55.5.3.4) <sup>5</sup> |
|                                     | transmitter clock frequency (55.5.3.5)          |
|                                     | MDI return loss (55.8.2.1)                      |

## R&S®RTO-K24

The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTO-K24 makes it possible to perform BroadR-Reach® compliance test measurements with R&S®ScopeSuite. R&S®ScopeSuite supports the R&S®RT-ZF2 Ethernet compliance test fixture set; it requires Windows 7. The chapters after the test cases refer to OPEN Alliance BroadR-Reach® (OABR) V3.2 and V3.0 and IEEE P802.3bw as subchapters of chapter 96.

| Supported BroadR-Reach® compliance tests |  |
|--|--|
| BroadR-Reach®                            | transmitter output droop (5.4.1)             |
|  | transmitter distortion with and without      |
|  | disturber (5.4.2)                            |
|  | transmitter timing jitter master mode        |
|  | (5.4.3)                                      |
|  | transmitter timing jitter slave mode (5.4.3) |
|  | transmitter power spectral density (5.4.4)   |
|  | transmitter clock frequency (5.4.5)          |
|  | MDI return loss (8.2.2)                      |
|  | MDI mode conversion Loss (96.8.2.2)          |
|  | MDI mode conversion Loss Adapter             |
|  | Verification (96.8.2.2)                      |
|  | MDI Common Mode Emission (96.5.1.2)          |

#### R&S®RTO-K25

The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTO-K25 makes it possible to perform 2.5G/5G Ethernet compliance test measurements with R&S®ScopeSuite. R&S®ScopeSuite supports the R&S®RT-ZF2 Ethernet compliance test fixture set; it requires Windows 7. The chapters after the test cases refer to IEEE P802.3bz

| Supported Ethernet compliance tests |   |
|-------------------------------------|---|
| 2.5G/5GBASE-T                       | maximum output droop (126.5.3.1)          |
|                                     | transmitter non-linear distortion         |
|                                     | (126.5.3.2)                               |
|                                     | transmitter timing jitter master mode and |
|                                     | clock frequency (126.5.3.3 and 126.5.3.5) |
|                                     | transmitter timing jitter slave mode      |

<sup>&</sup>lt;sup>6</sup> Requires an oscilloscope model with a bandwidth higher than or equal 3 GHz.

The R&S®RTO-K26 option is available for R&S®RTO models R&S®RTO1024, R&S®RTO1044 only. The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTO-K26 makes it possible to perform D-PHY compliance test measurements with R&S®ScopeSuite. R&S®ScopeSuite requires Windows 7. The numbers in front of the test refer to the MIPI CTS for D-PHY V1.1.

| Power analysis         |   |  |
|------------------------|---|--|
| General description    | The R&S®RTO-K31 power analysis option extends the R&S®RTO firmware with measurement functionality focused on switched mode power supplies (SMPS) and DC/DC converters.                                |  |
| Input                  | quality   | evaluation of power quality at an AC input; measures real power, apparent power, reactive power, power factor and phase angle of power, frequency, crest factor, RMS of voltage and current      |
|                        | harmonics   | measures up to the 40th harmonic of the incoming line frequency; precompliance checking for IEC 61000-3-2 (A, B, C, D), RTCA DO-160, MIL-STD-1399, max. limit checks                             |
|                        | inrush current  | measures peak inrush current; multiple<br>measurement zones configurable with<br>analysis of the post-inrush behavior  |
| Switching/control loop | slew rate   | The slope of current or voltage is measured at start and end of the switching cycle.   |
|                        | modulation  | measures modulation of switching<br>frequency and duty cycle under steady<br>state and start-up conditions   |
|                        | dynamic on-resistance   | measures resistance of the switching transistor(s) in active state   |
| Power path             | efficiency (only for 4 channel devices)   | measures input and output power to calculate the efficiency of an SMPS   |
|                        | loss  | measures switching loss and conduction loss of a power device  |
|                        | safe operating area (SOA)   | checks violation of voltage and current limits in which a power device can operate without damage; current versus voltage view (linear or log); violation mask is user-defined and editable in   |
|                        | turn on/off   | linear and log-log views measures relationship between AC and DC current, when turning the SMPS off and on   |
| Output                 | ripple  | measures AC components of output voltage and current, AC RMS, frequency, duty cycles, min./max./peak-to-peak amplitude   |
|                        | spectrum  | FFT analysis of output, measurement of frequency peaks   |
|                        | transient response  | This measurement captures the device behavior between the event of load changes and stabilization. includes peak (voltage, time), settling time, rise time, overshoot and delay                  |
| Deskew                 | automated   | By using the R&S®RT-ZF20 probe deskew and calibration test fixture and Rohde & Schwarz voltage and current probes, the skew between the voltage and current signal is compensated automatically. |
| Reporting              | easy reporting: Click to save a measurement. Report generation using user-selected test results from historical and currently-active tests. Put repeated and/or different measurements in one report. |  |

The R&S®RTO-K92 option is available for R&S®RTO1004, R&S®RTO1014, R&S®RTO1024 and R&S®RTO1044 models only. The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTO-K92 makes it possible to perform eMMC (HS200, HS400) compliance test measurements with R&S®ScopeSuite. R&S®ScopeSuite requires Windows 7.

### Extended warranty with a term of one and two years (WE1 and WE2)

Repairs carried out during the contract term are free of charge <sup>13</sup>. Necessary calibration and adjustments carried out during repairs are also covered.

### Extended warranty with calibration coverage (CW1 and CW2)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs <sup>13</sup> and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.

### Extended warranty with accredited calibration (AW1 and AW2)

Enhance your extended warranty by adding accredited calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated under accreditation, inspected and maintained during the term of the contract. It includes all repairs <sup>13</sup> and accredited calibration at the recommended intervals as well as any accredited calibration carried out during repairs or option upgrades.

<sup>12</sup> For options that are installed, the remaining base unit warranty applies if longer than 1 year. Exception: all batteries have a 1 year warranty.

<sup>13</sup> Excluding defects caused by incorrect operation or handling and force majeure. Wear-and-tear parts are not included.

### Service that adds value

- Uncompromising qualityLong-term dependability

#### Rohde & Schwarz

The Rohde & Schwarz electronics group offers innovative solutions in the following business fields: test and measurement, broadcast and media, secure communications, cybersecurity, monitoring and network testing. Founded more than 80 years ago, the independent company which is headquartered in Munich, Germany, has an extensive sales and service network with locations in more than 70 countries.

### Sustainable product design

- Environmental compatibility and eco-footprint
- Energy efficiency and low emissions
- Longevity and optimized total cost of ownership

Certified Quality Management ISO 9001

Certified Environmental Management ISO 14001
